Unlimited flexibility

Access HiDrive from any device, any time – from the office or on the go.

Access anywhere

Download the app to your smartphone or tablet to always have your files on hand. Laptop issues? Don't sweat it. Since your files are stored safely in the cloud, you can access them from any browser or any device.

Synchronisation

HiDrive integrates itself into your workday. The software for your Windows PC or Mac allows you to sync your folders to the cloud. This means changes made to a file online or locally will be synced across all versions.

Secure collaboration

Create individual, password-protected accounts for each team member. Share projects internally or externally with a link, and give people read-only access or editing rights. You can also set an expiry date for shared links, and limit the number of downloads.

Save email attachments

Organise and access email attachments more easily. Conveniently move them from any account to your HiDrive storage. Simply forward the email to HiDrive and it will save all attachments in a designated folder.

Scan documents

Don't rely on paper documents. Scan them with the HiDrive app and save them as PDFs with text recognition. It's a simple way to digitise anything from invoices to contracts, making them easier to find when you need them.

Protocols & NAS

Integrate HiDrive into your systems using SFTP/FTPS, WebDAV, SMB/CIFS, rsync, SCP or Git. You can also automatically back up data from your network attached storage (NAS). HiDrive supports a range of network hard drives.
